

Bug Fixes Summary

Three bug tickets closed on 2026-07-26, covering UI issues raised on the Companies and People pages.

Ticket #4: Filter dropdown scroll bug

Problem: On the Companies and People pages, scrolling while a filter dropdown was open scrolled the main results list behind it instead of the options inside the dropdown.

Fix: Gave the dropdown options list its own scroll container (`overflow-y: auto` , fixed max-height) and locked page scroll while a dropdown is open.

Commit: `18b2f21` Fix filter dropdown scroll fallthrough (ticket 5a)

Ticket #5: Re-verify Phone button on Companies table

Problem: The Companies table showed a "Re-verify Phone" button that should not have been there; it was only meant for the People table.

Fix: Removed "Re-verify Phone" from the Companies table. "Re-verify Email" stays on Companies; both buttons remain on People, no change there.

Commit: `4ac7d21` Remove Re-verify Phone button from Companies table (ticket 5b)

Ticket #6: Missing Job Title column on People table

Problem: People list view had no Job Title column, even though `job_title` already existed on the `people` table.

Fix: Added a Job Title column immediately after Full Name in the People list view, mapped to the existing `job_title` field.

Commit: `aafc106` Add Job Title column to People table (ticket 5c)

All three were logged as "bug" tickets in the app's internal ticket tracker, created 2026-07-25 and marked done on 2026-07-26.
